

FEMA

GOHSEP

“Louisiana will receive additional FEMA funding to rebuild stronger and safer and help to reduce the future loss of life and property. The workshops we are presenting will educate everyone about the rationale for rebuilding and the regulations that will help us assure funds are used appropriately. We look forward to seeing you at the workshop.”
Jeffrey Giering, State of Louisiana Hazard Mitigation Officer

Flood Provisions of the International Codes and ASCE 24

One-Day Course for Community Officials and Design Professionals

The Governor’s Office of Homeland Security and Emergency Preparedness (GOHSEP) with the Federal Emergency Management Agency (FEMA) will offer five one-day workshops to educate interested participants in ASCE 24, *Flood Resistant Design and Construction*, and flood provisions of the International Codes (I-Codes). Workshops are open to engineers, architects, floodplain managers, city planners and other interested participants. Discussions will cover the importance of coordinating local floodplain management ordinances with building codes and the applicability of these building codes to Federal funding sources.

FEMA determined the flood-resistant provisions found in the I-Codes to be consistent with the National Flood Insurance Program (NFIP). The workshop will begin with a discussion of flooding in Louisiana, methods of reducing flood risk and an overview of federal funding programs. Participants will learn how the I-Code provisions meet or exceed NFIP regulations, understand the relationship and distinctions between the I-Codes, ASCE 24 and NFIP regulations, and learn the importance of coordinating the I-Codes with local floodplain management ordinances.

Registration Information

There is no charge to attend. Registration on Eventbrite is necessary to reserve a seat. These workshops are eligible for Continuing Education Credits/Units and Professional Development hours for professional licensure/certification.
 Email Sandy.Bridges@fema.dhs.gov for more information.
