SITUATION

**016-12 Severe Weather State
Wide 20-22 March 2012**

A slow moving upper level storm system, combined with a slow moving frontal boundary, is setting up the potential for another round of severe weather throughout the State again this week.

While the entire State is still projected to receive rain, the concerns at this time are for the northwest, central and southwest portions of the State for the heaviest rainfall and possible flooding.

Additionally, several waterways in Southwest and Central Louisiana are projected to reach minor or moderate flood stage.

Details by region of the State are provided below along with the river forecast information for areas that are currently in and/or expected to enter into flood stage during this time frame.

SOUTHWEST LOUISIANA:
