At 1402 hours 13 June 2013, a notification was received of a pipeline leak in Franklin Parish near the community of Delhi. Denbury and Trans Canada are the two companies that have pipelines in the area. Denbury shut in all of their lines and confirmed the leak was not theirs. Trans Canada confirmed the leak was in their lines and that the product leaking is methane gas. It is estimated the second release to be between 2,000 and 2,500 barrels a day. There is no additional off-site impact at this time. Air monitoring continues to be in place.

At 1430 hours another meeting was held with all involved parties. The original release has almost completely stopped and it is believed that the trapped gases have found another path to the surface resulting in the second release. Crews have been reassigned to contain the by-products of the release and the plan for containment of the area seems adequate. At approximately 1400 hours, an area approximately one and a half miles from the original release location where another release had begun. This second release was not in existence this morning. This second release is gurgling up in the swamp in several places and elevating the CO2 and LEL levels in this area. At approximately 1500 hours, the Activation Level was changed to Crisis Action Team as of 1600 hours 17 June 2013.
