**FORECAST for LOUISIANA&nbsp;**

**<br />**

**</div>**

**Southeast Louisiana: There is an enhanced risk of severe thunderstorms today and tonight for southeast Louisiana. These storms will be capable of producing torrential rainfall within a short period of time. Amounts of 2 – 3 inches with localized amounts up to 5 inches may be produced. A Flash Flood Watch has been issued for all areas through 7:00 am Tuesday morning for this potential. Other main hazards associated with this incoming thunderstorm system include damaging winds, large hail, continuous lightening and isolated tornadoes.</div>**

**A Tornado Watch has been issued for 14 parishes in southeast Louisiana until 1:00 pm this afternoon.</div>**

**<br />**

**</div>**

**Southwest / Central Louisiana: A line of strong to severe thunderstorms is forecast to continue progressing eastward through the region this morning. Damaging winds, large hail, and tornadoes will be possible during these thunderstorms. In addition, there is a possibility of...</div>**
